Howling Moon Australia

WHY HOWLING MOON?

The Fabric: Military Spec 380gsm/sqm canvas with the perfect blend of cotton and polyester, all the modern technology upgrades offer stronger, superior thermal properties than your traditional canvases.

- Fluoro carbon impregnated for further protection against soilage and water ingress through the seams which also prevents wetting through the fabric, but most importantly still allowing the canvas to breathe.
- Additional emulsion used to withstand UV and weathering including an anti-fungal treatment. Seams are all double stitched for added protection. Durability and strength of the canvas will actually improve the more you use it. Hence why so many of our earliest tents are still being used.

Flysheet: Most durable nylon sourced and designed to allow optimum ventilation while still withstanding severe storm conditions.

Aluminium Base: The composite construction consists of Aluminium and high density polystyrene which gives us the edge over our competitors. It has a "super light", super strong base with insulation and thermal retention properties that won't bend, warp or crack over time like checker plate, plastic or wood. Having the hinges and mountings screwed into an aluminium base keeps them firm and strong.

Windows: Large aperture windows with commercial YKK zips. Side window insect screens can zip open to enhance the viewing out. Our gauze has been designed and tested to allow the best ventilation while still keeping out those pesky sand flies. Note: another unique feature is the rear window at the ladder entrance that allows for cross ventilation.

Mattress: The 75 mm high density, one piece mattress that is rolled when closed rather than creased. It is a standout to rivals, ensuring a peaceful nights sleep. One can also leave some bedding inside. Upgraded mattresses are available or simply add eggshell mattress topper if finding it too firm.

Cover: Exceptionally strong PVC with additional UV stabilisers and welded seams offering 100% water and dust proofing.

Stargazer (Shown above)

When ventilation is a priority. **The Stargazer** design allows more air to circulate between the Fly and the tent, making it the most innovative tent on the market. For the big sweater/avid bird watcher or romantic the fly can easily removed to view the stars. An optional extension can be added to provide additional living quarters.

Opening the stargazer feature is easily done by unclipping the fly. The roof windows have zippable gauze and canvas covers for easy access.

TENT SIZES

LENGTH	WIDTH	HEIGHT	WEIGHT	PACKED DIMENSIONS
2.4m	1.4m	1.2m	56kg	150x130x36cm
2.4m	1.6m	1.2m	66kg	170x130x36cm
2.4m	1.8m	1.2m	72kg	190x130x36cm
2.4m	2.4m	1.2m	98kg	260x130x36cm

Deluxe

The Deluxe was one of the first roof top tents manufactured, it is now our base tent in the range. Ideally suited for the budget or weekender/tourer who wants simplicity. For those not needing the creature comforts of a full extension but rather the optional extra shower skirt this is the tent for you. Most popular with trayback/trailer, suvs/sedan, boats/trikes.

Tourer

The Tourer is a comfortable solution for the serious adventurer. To date this has been the most copied design of ours in the market. The added roof extension protects you from the elements when climbing the ladder.

Snug Fitting fly prevents flapping in high winds and pooling of water. An optional extension can be added to provide additional living quarters.

Optional Extension (Nylon or Canvas)

Additional living quarters. The extension can easily be zipped on (1 min) and the pvc floor can be unzipped allowing easy cleaning or provides a great shower room. The extension comes with two side doors, front door with additional awning and a back door allowing easy access to the vehicle. Ideal vehicle height 1.8m and 2.1 but can be hemmed or custom made to suite.

The Howling Moon ladder: Our 2 piece slide ladder is anodised aluminium with "foot friendly, non slip" rungs. It's strong construction has a rating of 140kgs. Our stairs stay mounted to the base allowing for quick and easy set up and down of the tent.

General Material: All materials used in the base and mechanics of the tent are either anodised aluminium or stainless steel. There is no compromise on this specification ensuring that there are no parts in the tent that will either rust or corrode.

Dealer/ Warranty: We have expert dealers Australia wide and offer an unparalleled industry warranty on our range.

TESTIMONIALS

Rick Hucksteep spent 29 weeks traveling the most rugged terrain in Australia, enduring the full brunt of mother nature in his Howling Moon tent. Rick Hucksteep, consultant to the Marine, Tackle & 4wd industry. www.huckfish.com.au

My wife and I have used the Stargazer in the Victorian and New South Wales high Country, at times right up until the beginning of winter and find it very cosy even in below zero temperatures, so it isn't just for the warm conditions. Being off the ground makes a very big difference.

It's also excellent in the warmer inland climates due to the abundance of ventilation. Howling Moon products are a "top quality product".
