

Feedback: 2.5m 6 Arm SwingAwn

This awning requires 2-3 people for initial mounting, depending on height of your vehicle etc. and requires sturdy (preferably stainless steel or heavy gauge (5mm+)) brackets. It is better suited to a single cab ute (rather than dual cab, if mounting to a canopy), van or wagon so your brackets can be evenly spaced for weight distribution.

Due to the large size of the awning, it is best opened/closed with 2 persons to ensure a safe, tight and tidy result.

The awning has a tough protective casing when closed, and the awning itself is very durable, ergonomic and quality is second to none. Assembly is fast, simple and tidy with all the legs and straps enclosed within the arms and canvas.

It provides a massive undercover area, easily sheltering table and chairs, kitchen set-up, swags etc. It would be fantastic for families and groups to setup under for the weekend or longer. Pack-down is simple and straightforward, however depending on the height of the awning and height of the persons closing it, the weight of the canvas can prove a challenge. Its design is better suited to those setting up for a longer period of time rather than a daily open/close.

Regards, Josh and Sophie
