ECLIPSE
ROOF TOP TENT

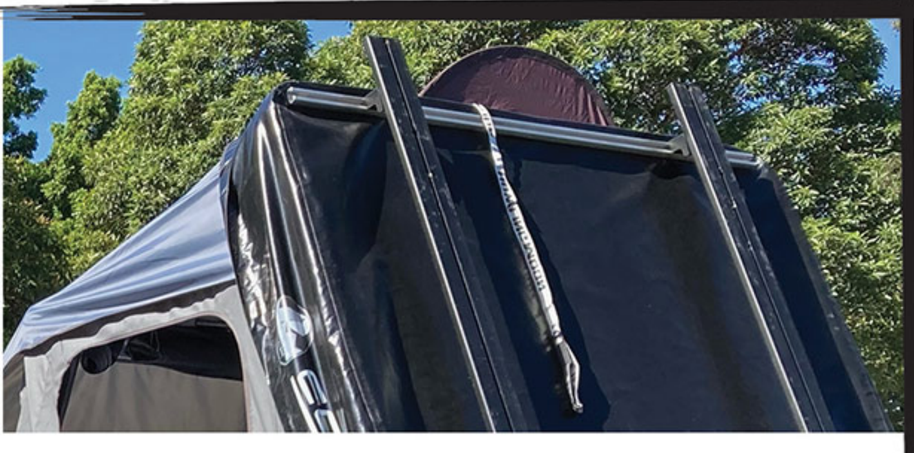
FEATURES

- Durable nylon flysheet allows optimum air flow and folds up with the tent

- Front window awning to allow for ventilation and protection

- Foot friendly ladder with non slip rungs rated to 140kgs is included



- Roof Rails built-in to top for mounting roof bars or other accessories

- 85mm foam mattress with quilt cover included

- 100% water and dust proof PVC cover with additional UV stabilisers and welded seams

The Eclipse – Quick set up.
The Eclipse is designed for a quick set up with gas assisted struts and the cover does not have to be removed due to the hard lid. Another benefit is one can mount roof bars (optional extra) on the top for surfboards, solar panels etc. It also has an additional window on the roof for stargazing, that can be left opened or closed.

Additional Specs:

- The grey canvas is military spec 370gsm/sqm with a perfect blend of cotton and polyester which offers stronger, superior thermal properties over traditional canvases. Fluorocarbon impregnated for protection against soilage and water ingress through the seams and also prevents wetting through the fabric but most importantly still allowing the canvas to breath. An additional anti-fungal treatment is used to withstand UV and weathering. All seams are double stitched for added protection. Durability and strength of the canvas will actually improve over time which is why so many of our earliest tents are still being used today.

- The base is made from a lightweight Aluminium extrusion construction offering “super light, super strong base with thermal and retention qualities”, which will not bend or warp over time like checker plate, plastic or wood.

- Heavy duty YKK Zips, ventilated and insect screened windows that allow to be opened if it is raining.

- Infinitely superior ladder in the market with foot friendly, non slip rungs rated to 140kgs.

- Large aperture windows with gauze designed and tested to allow for the best ventilation while still keeping those pesky sand flies out.

- Superior components used throughout the tent. Anodised aluminium or stainless steel. No compromise!

- Sufficient space for bedding when tent is folded. (Pillow and sleeping bag, excl. duck doona and dress pillows)

- Unique bungee cord system designed to assist in packing up of tent and withstanding heavy winds.

- Ventilated space between flysheet and main body eliminates condensation.

Specs:
- Weight approx. 60kg

Dimensions in cm.
- Closed 150W x 140L x 27H
- Open 150W x 210L x 140H
